

Still Think Global Warming Is A Myth?

Global warming is just part of a natural cycle. The Earth has been around for 4.5 billion years, and it's always been changing its climate.

CO2 is a natural component of the atmosphere. It's what trees breathe in and we breathe out.

Decreasing our CO2 output will collapse civilization as we know it!

Here Are The Undisputed Facts.

In the past 200 years alone, human activities have raised the amount of Carbon dioxide (CO2) in the atmosphere by 30% and doubled the methane content, a rapid change for an old planet.

-William Ruddiman, author of *Earth's Climate: Past and Future*

CO2 is a greenhouse gas, a chemical responsible for trapping the sun's heat on Earth, and more of it means less heat escapes.

-Brian T. Huber, author of *Warm Climates in Earth History*

CO2 emissions can be greatly reduced if everyone just takes a few small steps in the right direction. For info on how to reduce your CO2 output, visit <http://epa.gov/globalwarming>.
